If we do not presently support your model, please reach out to us so that we may start working on the integration. We will require sample files and specifications, which our Product Support team, with the help of the equipment representative, can collect. The new equipment's interface will then have to be programmed by our development team.

Whether new or already supported, please contact our Product Support team (403-314-1322 x 1 or support@visual-eyes.ca) for more information or to book an appointment time to integrate your new equipment.
